ABSTRACT

Method for Creating a Process-Driven System

A method for creating a process-driven information system. The method comprises the steps of creating a process model or models comprising one or more elements which are available in a browser-compatible format, creating one or more software components which are accessible in a browser compatible format and generating a process-driven information system comprising one or more elements of the process model which act as the user interface to the one or more software components. This method allows the rapid creation by non-technical users of process models describing the working of an organisation with the models being used as the user interface for directing the operation of a collection of software components.
